For Successful Fleet Management

Key Benefits

Chemtech Waste Management Ltd

Elimination of Overtime Claims

"Now that we are able to use OnLineAVL as an electronic time sheet, from first ignition on through to final ignition off for the day, we are able to provide accurate time sheets for our drivers. This has resulted in an annual saving of £7000."

Increase in Efficiency

"We realised that we had a problem of being able to manage our fleet in order to get the best possible out of it. Now with vehicle tracking we have improved our logistics process along with the communications between driver and office. We now do not have to phone up to find out where our drivers are to enquire about or dispatch jobs."

Increase in Customer Service

"Through enhanced management of our fleet we are now able to provide our customers with estimated times and days for collections along with supporting their on-demand queries of where the collection vehicles are."

Working Time Directive Compliance

"Through the enhanced use of electronic time sheets we are now able to provide validated evidence of drivers working hours to ensure compliance with the Working Time Directive."

"Improved fleet logistics increases our working efficiency"

Aron James, Managing Director, Chemtech Waste Management Ltd
